

## “DAF IN A BOX ©” FOR EFFLUENT TREATMENT SAVINGS

*For customers wanting trade effluent consent compliance and proven savings on trade effluent charges ...*

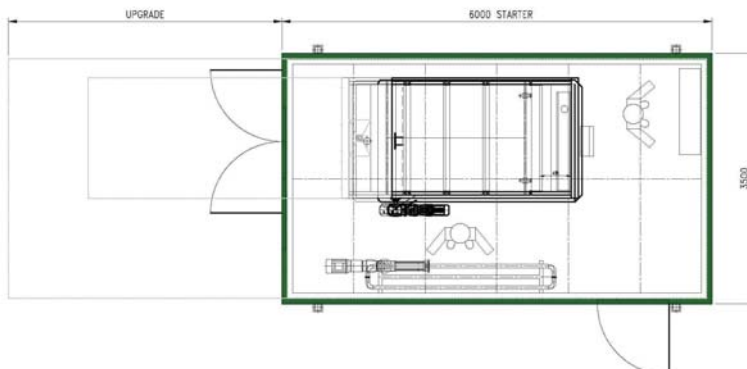

### Introducing the DAF IN A BOX concept

We have in the past provided Dissolved Air Flotation (DAF) plants to customers that provide proven savings but with a significant initial capital cost.

We have also noticed the trend towards customers wanting our DAF pilot scale plants and smaller hire plants longer term with a view to making some savings without committing to the major investment involved with large balance tanks and buildings.

So we have developed the DAF IN A BOX that contains a full-scale DAF plant ‘ready for use’ fitted inside a GRP housing on a ‘drain through’ raised skid floor. These units can be moved about, relocated to other sites, extended or returned after a fixed term period for a refundable deposit.
